Stocks of Grains

in All Positions

U. S. DEPT. OF AGRICULTURE
NATIONAL AGRICULTURAL LIBRARY

NOV 2 1962

CURRENT SERIAL

October 24, 1962

MOST MAJOR GRAIN STOCKS LOWER - OILSEEDS HIGHER

Stocks of feed grains and wheat on October 1 were sharply below the previous year. Corn accounted for the major decline with a 20 percent drop below the October record holdings of a year ago. Sorghum grain also declined from a year ago with 6 percent smaller stocks while oats and barley were about the same. The decline in corn and sorghums gave an accumulated decrease of 12 percent in total feed grain stocks. Stocks of wheat dropped 11 percent below a year earlier while rye stocks were 7 percent larger. Flaxseed stocks were nearly 50 percent larger than the previous year while soybean stocks were second largest of record and much above a year ago.

Wheat stocks of 2,069 million bushels stored in all positions were a sharp 11 percent below a year earlier and the smallest October 1 holdings since 1957. Wheat held in storage on farms and in Government-owned bin sites were both smaller than a year earlier but the bulk of the decline in total stocks occurred in elevators and warehouses. Disappearance of wheat from all storage positions during the July-September period was 331 million bushels, about the same as for the comparable period the past two years. More than 50 percent of the total stocks was either owned by the Government or under Government loan.

Durum wheat stocks were estimated at 69.5 million bushels on October 1, somewhat more than the 1962 production and indicating a disappearance of about 3 million bushels during the July-September period.

Rye stocks of 31.8 million bushels in all storage positions on October 1 were up 7 percent from a year earlier and were 12 percent above average. Farm rye stocks were increased sharply from last year but commercial storage decreased. Stocks of 19.0 million bushels of rye on farms were 31 percent larger than a year earlier and represented the largest October 1 holdings since 1958. Off-farm stocks of 12.8 million bushels were 16 percent below October 1, 1961. About 7 percent of the total stocks was either owned by CCC or under Government loan. Disappearance during the July-September quarter was 15.0 million bushels, compared with 11.7 million bushels for the same period last year and was the largest since 1945.

UNITED STATES DEPARTMENT OF AGRICULTURE

Statistical Reporting Service

GrLg 11-1 (10-62)

Crop Reporting Board

Washington, D. C.

Old Corn in all storage positions dropped to 1,613 million bushels, 20 percent below the record high stocks on October 1 last year. Farm stocks of old corn at 537 million bushels were 7 percent below a year earlier while October 1 holdings of nearly 1,075 million bushels of corn in off-farm positions were 25 percent smaller than a year ago. CCC owned one-third less corn than it did on October 1, 1961. The more rapid decline in CCC owned corn lowered the percent of off-farm corn stocks controlled by the Government to 83 percent compared with 93 percent last year. Disappearance of corn from all storage positions during July-September 1962 set a new record for the quarter continuing the pattern of record disappearance in each of the first three quarters of the crop marketing year.

Oats stored in all positions on October 1 amounted to 974 million bushels, about the same quantity as a year ago but 15 percent below average for this date. Nine-tenths of the oats was held in farm storages. Of the total stocks, only a small percent was owned by the Government or held under resale or purchase agreements. Disappearance during the quarter totaled 330 million bushels, the smallest amount for this period in the 20 years of record.

Barley stored in all positions totaled 448 million bushels, 3 percent above stocks October 1 last year and 18 percent above average holdings for that date. The CCC either owned or held under loan about 10 percent of the total, the smallest amount for this date in the seven years of record. Of the total barley stocks, 278 million bushels or 62 percent, was located in farm storages. Barley disappearance from July 1 to September 30 totaled 106 million bushels, compared with 112 million bushels disappearance for the same quarter last year and a record high of 156 million bushels in 1959.

Sorghum grain carryover stocks in all positions totaled 658 million bushels, 6 percent below October 1 holdings last year but, except for last year, the highest of record. Nearly all of the off-farm holdings were owned by CCC or under Government loan and nearly three-fourths of the old crop sorghums stored on farms was in resale or loan programs. Disappearance during the quarter (July-September) totaled 86 million bushels, two-thirds more than last year and the highest of record.

Soybean carryover stocks in all storage positions on October 1 were 58 million bushels, sharply above the 6 million bushel carryover a year earlier and the second largest of record. The bulk of the carryover stocks were under Government ownership or loan with nearly 11 million bushels resaled on farms and 40 million Government owned soybeans stored in off-farm positions.

2/ Off-farm total plus farm stocks.

Current stocks indicate a disappearance for the crop year, October 1, 1961 to September 30, 1962, of 641 million bushels. This is from a total supply of 699 million bushels (carryover October 1, 1961 of 6 million plus the 1961 production estimate of 693 million bushels). Estimated disappearance for the period includes crushings of 439 million bushels, about 155 million exported, and seed, feed and losses of about 38 million bushels. These disappearances total 632 million bushels which is about 1.5 percent difference from the indication of production and stocks.

Flaxseed stocks in all storage positions on October 1 totaled 26.1 million bushels. This is up 47 percent from year ago stocks but about the same as two years ago when supplies were more comparable. Of the total stocks, 14.8 million were stored on farms, and 11.3 million bushels were in off-farm positions. Current stocks indicate a disappearance during the July-September quarter of 9.1 million from a supply of 35.2 million (carryover of 3.6 million plus production of 31.6 million) bushels. During the quarter, crushings were reported at 4.3 million bushels and exports are estimated at nearly 1 million bushels. This does not take into account new flaxseed processed prior to July 1.

The data in this report are assembled by the Crop Reporting Board, bringing together stocks of CCC owned grains reported by the Agricultural Stabilization and Conservation Service as stored in bins, ships, and other storages under CCC control and estimates of the Crop Reporting Board for stocks on farms and at mills, elevators, warehouses, terminals, and processors.
